

Spotlight on Schools..

With the introduction of safeguarding comes the requirement for schools to consider their site security. There is a balance to be struck between community access, the undesirable ‘fortress school’ and safeguarding—taking **reasonable** steps to ensure pupils are safe on the school site.

We have carried out a huge number of projects for schools under the ‘safeguarding’ heading, helping them to address this paramount issue. There are a number of solutions available that effectively and aesthetically meet the safeguarding requirements.

Standard 868 mesh—200 x 50mm apertures

868 mesh—200 x 25mm apertures

‘V’ mesh—200 x 50mm apertures

Welded Mesh Panels

The most popular form of fencing for school sites is the welded mesh panel system - providing a variety of heights, mesh sizes and, of course, colours.

The basic principle of welded mesh panels; made from vertical and horizontal wires with a solid weld at each cross over point, the wire is galvanised and then polyester powder coated over the welds to protect from adverse conditions. The aperture created by the wires can be different sizes depending on the application and requirement.

‘358’ mesh—76.2 x 12.5mm apertures

Roll Top / Safety Top—150 x 50mm

Sports Rebound—50 x 66.5mm at lower section

Additional features can add privacy and usability whether that is around the perimeter or within the site..

Screenfence; 868 panel & polyethylene (PE) screens

‘V’ mesh and timber slats

Basketball hoops, goals and recessed goals

Railings

Railings come in a real variety of styles. Generally speaking they will consist of box section posts at approximately 2.8m apart with two horizontal rails and vertical infill bars. The choices come with the: height, infill bar size, infill bar spacing (gaps between verticals), top of infill bars and colours.

Gates

Gates are available to match all the styles of fencing that we do. As we fabricate the majority of them ourselves, we can accommodate all widths and requirements. Automation can also be incorporated to ensure your setting has the right access and exit solutions to keep your pupils and staff safe.

Kaleidoscope ROSPA compliant
 —one colour options available

A great option is the Kaleidoscope fencing; ROSPA compliant bow top with no head traps, in a variety of bright colours, with the added benefit of being a self-raking panel system, so easily able to cope with site undulations.

Or vertical bar railings can be fabricated with laser cut logos, a plethora of finial options, and, with our in-house fabricator, we can accommodate what might already be on site and create bespoke, perfectly fitting, solutions!
