

Fencing Matters

Issue 12 June 2021

SURPRISING WHO TURNS UP ON SITE

There was an unexpected visitor for the team installing timber fencing on to an existing wall with the use of bespoke brackets. The beautiful sunny weather, the water's edge location and this little fella, made it seem quite Mediterranean!

Ready for Action as Doors Reopened

At a time when so many businesses were forced to close during the pandemic, or to alter their services to meet the temporary regulations, this local garden centre was busy getting ready for the day of re-opening. With vehicle impact barriers and pedestrian handrails, their walkways are nicely demarcated, and greenhouses situated next to the busy car park are kept safe from vehicle impact.

The versatile key klamp/tube clamp product easily adapts to the site conditions, with a range of fittings. Seen here in a galvanised finish, but powder coated finish is also available.

The corrugated crash barrier fencing is a popular and worthwhile addition to commercial settings, protecting buildings and assets from vehicle damage. Available in double height where lorry movement is high and with bolt down or root fixed posts.

Fabricated...Galvanised...Powder Coated and Installed

Another beautiful set of contemporary gates. Fabricated in our workshop to the exact site requirements and to the customer's specification. Then it's off to the galvanising plant to give the gates protection against corrosion. Then to the powder coating facility to be finished in an anthracite grey—really setting them off and in keeping with the client's colour scheme. Finally, installed on site by one of our very experienced teams.

Timber and Steel Combo

The timber gate styles we can offer are endless, and the timeless beauty of wood never tires. But this versatile natural product will continue to move even after fabrication. We offer metal box section posts to give a high quality, long-lasting installation. Always galvanised and offered with a powder coated finish in any colour, gates will swing smoothly and free of issues for much longer than when installed with timber posts.
